HHS RANGE - Product application guide

Auto and Commercial workshops

Adhesive Lubricant HHS® 200

Rubber bushes and suspension bushings

Reduces squeaks and wear on stabiliser bar bushes, control arm bushes, and cab suspension rubbers.

Door hinges and locks

Smooth, quiet operation on truck and bus doors, cargo shutters, and tailgate locks.

Sliding seat rails and bonnet hinges

Lubricates adjustment tracks, bonnet hinges, and inspection hatches for long-term reliability.

Workshop lifts

Keeps pivot points, safety latch hinges, and cover plates moving freely.

Floor jacks and transmission jacks

Ideal for lubricating wheels, handle pivots, and release lever mechanisms.

Seal compatibility

Protects O-rings in pneumatic tools, clutch linkages, and lift hydraulics.

Adhesive Lubricant HHS® 2000

High-pressure suspension bushes

Withstands heavy loads in leaf spring eye bushes, torque rod bushes, and chassis-mounted suspension joints.

Rubber/metal bonded bushes

Provides lasting lubrication and squeak reduction where rubber meets steel under torsion stress.

Workshop lifts

Perfect for carriage rollers, sliding guides, and lifting arms subject to extreme pressure.

Hydraulic jacks

Keeps moving joints (pedal pivots, release mechanisms, and rollers) smooth and corrosion-free.

Clutch, brake, and throttle linkages

Handles repeated, high-stress pedal and cable operations without shearing off.

Universal high-load points

For gear racks, sprockets, and open gears in lifting and heavy cargo-handling equipment.

Adhesive Lubricant HHS® 100

Suspension linkages and bushes

Creeps into control arm bushes, cab tilt bushes, and stabiliser connections to reduce noise.

Truck liftgates and chain systems

Penetrates and protects chains and sprockets used in cargo liftgates and workshop hoists.

Workshop hoists and cranes

Lubricates chain and wire rope drives on 2-post lifts, chain hoists, and workshop gantries.

Exposed joints and pivots

Protects suspension arms, steering linkages, and anti-roll bar connections under dirt and road spray.

Protective wax film

Leaves a dry coating on outdoor lift chains and exposed workshop doors, reducing dust adhesion.

Tight-space maintenance

Effective for hard-to-reach tilting cabin pivots and steering shaft bushes.

Adhesive Lubricant HHS® 500

Suspension components under shock load

Protects heavy-duty truck suspension bushings, shackle pins, and torque rod joints from vibration and dirt.

Workshop lifts and hoists

EP-strength grease spray for lift chains, spindle threads, and carriage guides exposed to pressure and dirt.

Floor and bottle jacks

Provides reliable lubrication for exposed wheel bearings, lifting arm pivots, and screw threads.

Wire ropes and winches

Essential for tow truck cables, recovery winches, and workshop hoist ropes.

Outdoor equipment

Long-lasting protection for yard-based lifting gear, exposed stabilisers, and landing legs.

Extreme loads

Withstands vibration and impact from suspension service work, spring compressors, and cargo lifts.

Corrosion and dirt control

Keeps lubricated points cleaner and service-ready in harsh workshop conditions.
